SUMMARY

Full-stack Ruby on Rails Developer with 3+ years building cloud-native, scalable web applications in Agile/DevOps environments. Proven experience delivering production Rails services with CI/CD pipelines, Redis, PostgreSQL, and RESTful APIs. Comfortable owning features end-to-end across iterative sprints.

TECHNICAL SKILLS

Languages: Ruby, JavaScript (ES6+), TypeScript, SQL, Python, Java, C#, PHP, C

Frameworks & Libraries: Ruby on Rails (MVC, ActiveRecord, ActionCable), React.js, Node.js, Express.js, ASP.NET Core, jQuery, Bootstrap

Databases: PostgreSQL, MySQL, MongoDB, Redis

Tools & Technologies: Git, GitLab, Docker, AWS (S3), CI/CD Pipelines, RESTful APIs, WebSocket, RSpec, Postman, Kafka

Methodologies: Agile/Scrum, Test-Driven Development (TDD), Object-Oriented Programming (OOP), Microservices Architecture

WORK EXPERIENCE

Full Stack Engineer - Intern

May 2025 – Aug 2025

ICE Robotics

Toronto, ON

- Shipped responsive React.js/TypeScript front-end components linked with Node.js/Express REST APIs, reducing page load time by 15% through code splitting, lazy loading, and optimized render cycles.
- Translated product requirements into modular, reusable React component libraries following atomic design principles, working closely with designers and engineers across two-week Agile sprints.
- Identified and resolved performance bottlenecks using React DevTools; refactored component state management with hooks (useState, useEffect, useContext), cutting unnecessary re-renders and improving maintainability.

Software Engineer

Jan 2022 – Aug 2024

Tatvasoft

India

- Designed and scaled REST APIs in Ruby on Rails for CRM and Charging Station microservices platforms serving mobile apps and physical hardware devices, improving data handling efficiency for more than 5,000 users and reducing system downtime.
- Refined SQL and NoSQL queries (PostgreSQL, MongoDB) through strategic indexing and query restructuring, cutting average data retrieval time by at least 50%.
- Implemented Redis caching strategies and Kafka event-driven pipelines for real-time data streaming across microservices, improving API response time and overall system throughput by 60%.
- Partnered with more than 12 front-end and DevOps team members to integrate back-end services with CRM and third-party applications, reducing integration issues and ensuring reliable data flow across systems.
- Wrote comprehensive RSpec unit test cases achieving 100% test coverage, led code reviews, and maintained technical documentation, reducing post-release defects and improving code reliability.
- Shipped real-time broadcast channel features with ActionCable, integrated third-party APIs (payment gateways, email/SMS), and maintained CI/CD pipelines on GitLab, shortening release cycles by 60% and ensuring reliable deployments.
- Deployed cloud-native Rails applications on AWS, leveraging managed services for scalability and reliability.

EDUCATION

Lambton College

Toronto, ON

Post-Graduate Certificate, Full Stack Software Development | GPA: 3.52/4.0

Jan 2024 – Aug 2025

Gujarat Technological University

Gujarat, India

Bachelor of Technology, Information Technology | CGPA: 9.51/10.0

Jul 2018 – May 2022

PROJECTS

Farm Fresh | *HTML, CSS, JavaScript, PostgreSQL, RESTful APIs*

- Engineered a responsive product management system using JavaScript, improving user interaction efficiency through real-time DOM updates by 70%.
- Accelerated data handling with asynchronous operations, reducing perceived load time and enhancing UI responsiveness.

Helperland | *Ruby on Rails, jQuery, JavaScript, HTML, CSS, MySQL, AJAX*

- Built a full-stack home services booking platform using Ruby on Rails MVC architecture with real-time appointment scheduling, reducing booking errors by 80%.
- Designed PostgreSQL schema with ActiveRecord associations, integrated third-party APIs, and wrote RSpec unit tests to keep the codebase reliable as features grew.
