

Full-stack Engineer with 3+ years of experience across React, TypeScript, Node.js, Express.js, and Ruby on Rails, delivering scalable web applications and **RESTful APIs** in **cloud-native**, **Agile** environments. Improved system performance by up to **60%**, reduced page load times through modern front-end optimization, and built event-driven microservices with Redis. Experienced in exploring AI technologies and interested in building real AI-powered product features that solve practical user problems. **Collaborate** closely with cross-functional teams to translate ambiguous requirements into reliable, well-documented solutions, **owning features** end-to-end across **iterative sprints**.

SKILLS

Programming	JavaScript (ES6+), TypeScript, Ruby, Python, SQL, Java, C#, PHP, C
Frontend	React, Redux/Context API, JavaScript (ES6+), HTML5, CSS3, jQuery, Bootstrap, Responsive Design
Backend & APIs	Node.js, Express.js, Ruby on Rails (MVC, ActiveRecord, ActionCable), RESTful API Design, WebSocket, Microservices Architecture
Databases	PostgreSQL, MySQL, MongoDB, Redis
Cloud & DevOps	AWS (S3), Azure, Docker, CI/CD Pipelines (GitLab), Git, Postman
Practices	Agile/Scrum, Test-Driven Development (TDD), RSpec, Object-Oriented Programming (OOP), Code Reviews, Technical Documentation

TECHNICAL EXPERIENCE

Full-Stack Engineer — Intern

ICE Robotics

May 2025 – Mar 2026

Toronto, ON

- Built and shipped **responsive React.js** and **TypeScript** front-end components integrated with **Node.js/Express REST APIs**, reducing page load time by **15%** through code splitting, lazy loading, and optimized render cycles.
- Refactored component state management using React Hooks (**useState, useEffect, useContext**), eliminating around 14 re-renders and improving front-end maintainability across the codebase.
- Diagnosed and resolved front-end performance bottlenecks using React DevTools, translating findings into actionable optimizations across **two-week** Agile sprints.
- Designed modular, reusable React component libraries following **microservices design** principles, **collaborating** directly with a team of more than 8 (designers and backend engineers) to ship production-ready features.

Full-Stack Software Engineer

Tatvasoft

Jan 2022 – April 2024

India

- Developed and maintained a React.js and TypeScript front-end for an EV battery monitoring platform supporting an internal team of **30+ users**, building reusable, scalable UI components to visualize **real-time** battery and charging station data.
- Designed backend services in Node.js within a **microservices architecture**, powering scheduled **background jobs** and **100+ REST APIs** consumed by the dashboard.
- Engineered robust SQL and NoSQL databases, including PostgreSQL and MongoDB; implemented data integrity measures that enhanced retrieval speeds by 75% while streamlining access for over 200 concurrent users in real-time applications.
- Leveraged **Redis** to cache time-series graph data for dashboard visualizations, cutting data retrieval time from 1-2 minutes (with occasional timeouts) down to milliseconds.
- Used **AWS S3** for application asset storage and integrated the **Google Analytics** API to track user behavior and click-through for 10,000+ user interactions across connected platforms.
- Managed application state using **Redux** and **Context API**, and implemented end-to-end validation across frontend and backend, supporting a production database of **6,000+ users** and inventory records exceeding double that volume in transaction data.
- Wrote unit and integration **tests** using Jest, achieving close to **100% test coverage** on core features.
- collaborated closely with QA to diagnose and resolve **3–4 production issues** weekly, deploying fixes via **Git/GitLab** CI workflows.

EDUCATION

Post-Graduate Certificate in Full Stack Software Development, Lambton College, GPA : 3.52/4.0

Bachelor of Information Technology, Gujarat Technological University, CGPA : 9.51/10.0

2024-2025

2018-2022
